

Total estimated dose due to emissions at Point Lepreau Generating Station

Comparison

Natural background radiation: 2,000-5,000 μSv per year

Legal limit for dose from emissions: 1,000 μSv per year (CNSC)

Single chest X-ray: approximately 70 μSv

Total radiation dose due to emissions from Point Lepreau Generating Station since 1983: 28.15 μSv

YEAR	LIQUID	AIRBORNE	TOTAL
1987	0.03	0.70	0.73
1988	0.02	0.72	0.74
1989	0.07	0.70	0.77
1990	0.16	0.83	0.99
1991	0.08	0.73	0.81
1992	0.07	1.41	1.48
