

PROTECT YOUR HOME AND FAMILY FROM CARBON MONOXIDE GAS

Carbon Monoxide is one of the leading causes of accidental poisoning.

Carbon Monoxide is a by-product of combustion from items such as wood stoves, gas fires, oil-burning furnaces, camping stoves, barbecues and portable generators.

Stay safe by:

- never running a generator in your home, garage, near a window or air intake outside of your house
- never using a barbecue, a camping stove or a propane heater inside your home or garage

There is no safe way to run a generator or to cook with a camping stove in your home or garage.

Carbon monoxide poisoning can still occur if you have opened your window or garage door.

IF YOU THINK A LOVED ONE HAS BEEN AFFECTED BY CARBON MONOXIDE SEEK HELP IMMEDIATELY!
