

# Total estimated dose due to emissions at Point Lepreau Generating Station

Énergie NB Power

## Comparison

Natural background radiation: 2,000-5,000  $\mu\text{Sv}$  per year  
Legal limit for dose from emissions: 1,000  $\mu\text{Sv}$  per year (CNSC)  
Single chest X-ray: approximately 70  $\mu\text{Sv}$   
Total radiation dose due to emissions from Point Lepreau Generating Station since 1983: 29.35  $\mu\text{Sv}$

| YEAR         | LIQUID      | AIRBORNE     | TOTAL        |
|--------------|-------------|--------------|--------------|
| 1983         | 0.01        | 0.14         | 0.15         |
| 1984         | 0.05        | 0.22         | 0.27         |
| 1985         | 0.02        | 0.35         | 0.37         |
| 1986         | 0.06        | 0.72         | 0.78         |
| 1987         | 0.03        | 0.70         | 0.73         |
| 1988         | 0.02        | 0.72         | 0.74         |
| 1989         | 0.07        | 0.70         | 0.77         |
| 1990         | 0.16        | 0.83         | 0.99         |
