

# Total estimated dose due to emissions at Point Lepreau Generating Station

## Comparison

- Natural background radiation: 2,000-5,000  $\mu\text{Sv}$  per year
- Legal limit for dose from emissions: 1,000  $\mu\text{Sv}$  per year (CNSC)
- Single chest X-ray: approximately 70  $\mu\text{Sv}$
- Total radiation dose due to emissions from Point Lepreau Generating Station since 1984: 30.53  $\mu\text{Sv}$

YEAR	LIQUID	AIRBORNE	TOTAL
1984	0.05	0.22	0.27
